

General Illicit Discharge

Prevent Pollution to Area Waterways: Don't Dump Down Road Drains

Soaps, solvents, oil, trash, sand, yard clippings or other material should not enter road drains or drainage ditches. Pollutants that flow through storm drains go directly into streams and waterways without being treated or purified. This pollution impacts aquatic life, wildlife, and people who recreate and fish. Please do your part to keep our waterways clean: properly dispose of or recycle your household and yard waste, and participate in our community household hazardous waste pick-up programs.

If you see or experience a problem with stormwater, such as areas that flood, or the results of pollutants going into the storm drain system, please alert us. Please call our Hotline at **(970) 263-8201**. Our offices are located at 250 N. 5th Street, Grand Junction, Colorado.
